

Name: Sarah Jenkins

Occupation: business owner, pastry chef, and entrepreneur

Age: 34

Story: Sarah grew up in a small city and she wasn't raised in a good area. Sarah had to work part time throughout high school to support herself financially as well as helping her mom out. She went to community college and got into a baking program which became a career choice for her. She would work night shifts in local bakeries and sometimes overnight. Throughout the last 2 years of her college journey, she fell in love with culinary, especially with baking. Now she donates to local shelters and every sell she makes in the bakery that she owns, it goes towards scholarships her bakery has for upcoming bakers.

"Hi everyone, my name is Sarah Jenkins. I'm 34 years old and I'm a business owner. I love baking and creating delicious treats for parties, shelters, events, and special holidays. My goal is to try to make treats for people to enjoy and love every time they take a bite out of it. I want them to love it more and more whenever they have it. Even though its exhausting, I love the thrill of making treats on a busy day and seeing fellow customers. Despite schedules being chaotic, inventory being all over, and events coming in every day, it helps my business and that's why I love doing what I do."

picture:

Challenges: time management, intense workload, storage limitations, and food waste

Dislikes:

- Wasting food

- Lack of organization
- Burnout

Likes:

- Customer joy
- Donating money
- Cooking for local shelters and more

Purpose statement:

My website is to help people like sarah jenkins to organize her scheduling especially for her coworkers but to also help with storage inventory like how much food they need and when the deliveries are coming. I want to make the website a helping guide for upcoming business and it serves as a professional tool to help other companies especially hospitality businesses. Through this site, I hope I'm able to learn from this by scheduling things correctly and not leaving things last minute.

Website Purpose Statement:

"The purpose of the website is to help me and other upcoming entrepreneurs to organize things correctly, keep track of their materials, and to also manage their time as well. Not only will this website help other people to keep track of things but it will also help them by keeping coworkers focused and stay put together incase something goes wrong. My goal is to use this website as a planning helping tool for other websites and not only will it help others but it will also help me as well.

Description of Prototype:

What is the website mainly for?

The website is for people who are upcoming entrepreneurs in different fields (mostly in the culinary field). To help them stay organized and help their workers as well to reduce stress around work.

What will be the most useful thing that this prototype can do?

The most useful thing this prototype can do is to keep things in track like how many items will be needed in the inventory and what needs to be restocks. Another useful thing about this is that it helps reduce stress and it gives out messages/alerts via message to the owner to be alerted on what needs to be restocked!

Who can use this website?

Anyone can use this website! But anyone under 18 years old needs to be signed through a parents email or account. It has to be verified carefully since this website is used for BUSINESS.

What will make this website a little bit more different and unique than your other websites you made in the past?

This website will focus more on scheduling, stocking, inventory, and other things that keep the business going. It won't be a Main website with a menu, photos, and more. This digs in more into the operations around a business.

Feedback:

Name: Sasha Braus

Age: 24

Location: Paris, France

Personality: Nice, friendly, funny, and very nerdy but in a very nonchalant way. Sasha loves cooking. She loves eating and trying different foods from different cultures—she is currently taking cooking classes to use for her future home cooking business. They just love food and it's their best friend.

Vibe: Comedic yet supportive feedback and she keeps it professional without making it boring. They love the website idea and want to use it for her upcoming business.

Favorite quote: “cooking is my love language”

Sasha says:

“HIII!! I just saw your website and it sounds amazing! Coming from someone who wants to start their own business I find this really helpful. Im really curious on how to use this website and is it okay if i can ask you a few questions to understand it more?”

Sasha questions:

Will users be able to communicate through the prototype and how will it help me and my future workers?

Yes, you will be able to communicate through the prototype! It will help you and your workers by communicating on what needs to be done and scheduling but the prototype itself communicates with you and other workers by sending notifications via message/email.

Do you send rewards when something is done?

Yes we do! We want to make others feel better by completing a task that needs to be done. It's a positive reinforcement for them to keep going on doing more tasks./goals!

Organizer business website- Design document:

Project summary:

The website is an interactive platform designed to help upcoming entrepreneurs on staying organized with storage inventory, stocking, and materials. This product matters because it will help other businesses stay organized and kept together.

Problem Statement:

Many businesses tend to lack organization which leads to a bad stressful working environment and toxic working relationships. But it can also lead to loss of money

Use Case:

This app will be used by adults (under 18 will need to have an account under a parents name). They will use it to help them on what needs to be done, task, and who needs to clock in to work.

Goals and Objective:

- 1) Provides as a helpful tool guide for users
- 2) Creates a helpful environment within the company/business working this and it can help reduce stress and hectic work environments/relationships.

Key features and Functions:

- 1) Interactive app: checks boxes = completion, zero check boxes = needs to be completed
- 2) Via message/email alerts

Tech stack and tools:

Frontend: react native, flutter, or swift kotlin for mobile apps.
